

Hepatitis B Requirement Guidelines

For internal and student use.

- The Hepatitis B vaccination protects against Hepatitis B.
- *Upload your requirements documentation to ACEMAPP.*

The following information is based on CDC Hepatitis B guidelines for health care workers.

To fulfill this requirement, you must:

1. Receive at least one complete series of Hep B vaccinations (past or present).

OR

Prove immunity through a surface antibody titer result of “positive” or “reactive.”*

OR

Prove that you are a non-responder by receiving a second series of vaccinations and your surface antibody titer result is “negative,” “non-reactive,” or “equivocal.”*

**Only a surface antibody titer result can be used to fulfill this requirement.*

Exemption: *A student is exempt from this requirement if deemed allergic to the vaccination. Documentation of this allergy from a healthcare provider is required and may impact professional practice placements and necessitate additional precautions.*
